                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention relates to a novel Helicobacter felis urease X and Y subunit polypeptides and immunogenic fragments. The polypeptides are used in the manufacture of vaccines against Helicobacter felis infections and in diagnostic tests to detect antibodies against Helicobacter felis is felicult to grow so it is more convenient to use the expression products of the genes encoding the urease X and Y subunits in the manufacture of vaccines. The present sequence represents an ureaseXX subunit of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  278
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    120

                                                                                                                                                                                                                                                                                                                                                                                                                                                        Y subunit polypeptides and immunogenic fragments. The polypeptides are used in the manifacture of vaccines against Helicobacter felis infections and in diagnostic tests to detect antibodies against Helicobacter felis infections Helicobacter felis is difficult to grow so it is more convenient to use the expression products of the genes encoding the urease X and Y subunits in the manufacture of vaccines. The present sequence represents an ureaseXY subunit of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  325

The polypeptides are used in the manufacture of vaccines against Helicobacter felis infections and in diagnostic tests to detect antibodies against Helicobacter felis in Helicobacter felis is difficult to grow so it is more convenient to use the expression products of the genes encoding the urease X and Y subunits in the manufacture of vaccines. The present sequence represents an ureaseXY subunit of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          325

The polypeptides are used in the manufacture of vaccines against Helicobacter felis infections and in diagnostic tests to detect antibodies against Helicobacter felis is Helicobacter felis is difficult to grow so it is more convenient to use the expression products of the genes encoding the urease X and Y subunits in the manufacture of vaccines. The present sequence represents an ureaseXX subunit of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 265

Helicobacter bizzozeronii an ability to produce urease, where the nucleic acid molecule is a urease gene cluster comprising at least one urease accessory gene. The nucleic acid molecule is chosen from urea, ureB, ureB, ureG, ureH and ureI. The invention also relates to an isolated protein encoded by the nucleic acid, a vaccine for preventing onset of disease in mammals infected by H. bizzozeronii comprising a nucleic acid and a carrier, and an isolated cantibody or its binding portion raised against the nucleic acid. The nucleic acids, proteins and antibodies are useful for vaccinating mammals antibody or its binding portion raised against the nucleic acid. The involves administering the sequences. The sequences are useful for detecting H. bizzozeronii in a sample of tissue or body fluids which involves providing a nucleic acid as an antigen, providing an antibody, or providing an uncleic acid as an antigen, providing an antibody, or providing an uncleid sequence as a probe in a nucleic acid or providing an antibody, and detecting any reaction which indicates that H. bizzozeronii is present in the sample. This sequence represents the H. bizzozeronii
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       2378
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ر.

sequences coding for the urease A (AAW07193) and urease B (AAW07194) subunits of Helicobacter pylori clinical isolate CPM630. To obtain pORV214, a genomic DNA library of CPM630 was screened with anti-Helicobacter urease antibody. A 17 kb Sall fragment from an isolated clone was subcloned into pUCI9 to give pSCP1. PCR primers (AAT44352-53) were used to amplify a 2.5 kb fragment from pSCP1, which was inserted into pGT24+ to give pORV214. The vector was utilised in the prodn. of recombinant, enzymatically inactive, multimeric urease in B. coli transformants for use in vaccines to treat or prevent Helicobacter infection. The sequence encodes urease UreA and UreB proteins, which are components of a novel immunogenic composition capable of inducing protective antibodies against Helicobacter infection. The composition may include the UreA or UreB proteins, a urease-associated heat shock protein (AAR74338-39) or the UreI protein (AAR74340). The composition is used to prepare a vaccine for humans or animals, especially against H. pylori and H. felis. Antibodies against the proteins may be used for treating Helicobacter infection, and primers/probes to the DNA sequence may be used for detection of Helicobacter infection. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                          Immunogenic composition against Helicobacter infection - also gene fragment(s) and protein(s) from Helicobacter urease gene cluster and heat shock protein(s).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 2619 BP; 772 A; 569 C; 665 G; 613 T; 0 U; 0 Other;

A portion (AAT45680) of plasmid pILL205 (CNCM I-1355) comprises the Helicobacter felis structural urease gene encoding urease subunits A (AAM06729) and B (AAM06730). pILL205 was obtd. by examining the expression of urease activity by H. felis cosmid clones and identification of the H. felis genes required for urease expression when cloned in B. coli. The urease gene can be used to design probes for the detection of Helicobacter infection, or utilised in the prodn. of recombinant urease subunits for use in novel immunogenic compsns. (Updated on 16-OCT-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CAACCAACCCGAAGCCATTGCTTACATTAGTGCCCATATTATGGACGAAGCGCGCGTGG

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to inducing an immune response against Helicobacter in a mammal, comprising mucosally administering to the mammal an attenuated Salmonella vector containing a nucleic acid molecule encoding a Helicobacter antigen, and parenterally administering to the mammal a Helicobacter antigen. Also included is an attenuated Salmonella vector comprising a nucleic acid molecule encoding a Helicobacter antigen. The Helicobacter antigen antenuated salmonella vector is a urease, a urease subunit, or its immunogenic fragment (encoded by the ureA and ureB genes). The mammal is at risk of                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Inducing an immune response against Helicobacter in mammals, useful treating Helicobacter induced gastroduodenal diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Salmonella vector pHUR3 expressing helicobacter antigens, SEQ ID
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ä                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              WO200132014-A2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Kleanthous H,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      01-NOV-1999;

having but does not have Helicobacter infection or has a Helicobacter infection. The attenuated Salmonella vector further comprises an htra or mirb promoter. The vector can be used in inducing an immune response against Helicobacter. The vector can be used to treat Helicobacter induced gastroducdenal diseases, including acute, chronic or atrophic gastritis, peptic ulcer diseases, including acute, chronic or atrophic gastritis, peptic ulcer diseases (e.g. gastric or duodenal ulcers), and gastric carcinoma. Attenuated Salmonella vector pHUR3 was constructed expressing UreA and UreB and including an B. coli AmpR gene. The present sequence represents the pHUR3 plasmid. NOTE: pHUR3 is represented by both AEB55112 and AEB55130, the peptides expressed by pHUR3 are shown in the sequence listing to be split between AEB55112 and AEB55130, yet Figure 4 shows all the peptides being expressed by sequence. therefore all encoded peptides are cross-referenced to both sequences.

Sequence 4824 BP; 1389 A; 1090 C; 1146 G; 1199 T; 0 U; 0 Other;

The invention relates to inducing an immune response against relationacter in a mammal, comprising microsally administering to the mammal attenuated Salmonella vector containing a nucleic acid molecule encoding a Helicobacter antigen. Also included is an attenuated Salmonella vector comprising a nucleic acid molecule encoding a Helicobacter antigen. Also included is an attenuated Salmonella vector comprising a nucleic acid molecule encoding a Helicobacter antigen. The Helicobacter antigen is a urease subunit, or its immunogenic fragment (encoded by the urea, and urea genes). The mammal is at risk of having but does not have Helicobacter infection or has a Helicobacter. The vector can be used in inducing an immune response against Helicobacter in a mammal. The vector can be used to treat thelicobacter infection. The vector and the method can be used to treat Helicobacter infection. The vector and the method can be used to treat atrophic gastric carcinoma. Attenuated Salmonella vector pHUR3 was constructed expressing Urea and Urea and including an is constructed expressing Urea and Urea and including an E. Coll AmpR gene. The present sequence represents the pHUR3 plasmid. NOTE: pHUR3 is constructed expressing urea and urea method can be used by the one the represented by both ArbSill2 and ArbSill2 and ArbSill3 of the peptides expressed by the one assence, therefore all encoded peptides are cross-referenced to both and a processing and expressed by the one are cross-referenced to both.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 268
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              148

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The DNA is a 2.7 kb TaqI fragment encoding the A and B subunits of H. pylori (previously C. pylori) urease, i.e. the 66 and 31 kD antigens. From the sequence, probes and primers can be designed for the amplification (by PCR) of the gene, to produce a prods. common to all H. pylori strains so far tested and which do not occur in other ureases and can therefore be used as a specific indication of the presence of H. pylori. H. pylori (previously C. pylori) is strongly implicated in the pathogenesis of gastritis and duodenal and peptic ulceration in man. The primers/probes can be used for the detection of H. pylori DNA in gastric nucosa, saliva or faecal samples to provide an early diagnosis of infection. See also AAQ12434-Q12486. structural gene and at least one utease accessory gene. The nucleic acid molecule is chosen from ureA, ureB, ureF, ureG, ureH and ureI. The invention also relates to an isolated protein encoded by the nucleic acid, a vaccine for preventing onset of disease in mammals infected by H. bizzozeronii comprising a nucleic acid and a carrier, and an isolated at this binding portion raised against the nucleic acid. The capainst onset of disease caused by infection of H. bizzozeronii, which involves administering the sequences. The sequences are useful for detecting H. bizzozeronii in a sample of tissue or body fluids which involves providing a nucleotide sequence as a probe in a nucleic acid as an antigen, providing an antibody, or providing a nucleotide sequence as a probe in a nucleic acid thybridisation assay, contacting the sample with the antigen or the probe, and detecting any reaction which indicates that H. bizzozeronii is present in the sample. This sequence represents H. bizzozeronii ureB DNA.

                                                                                                                                                                                                                           This sequence encodes H. felis urease B. This sequence was used in the method of the invention for raising an immune response in an animal. The method comprises administering to the animal a composition comprising a carrier and an antigen bound to a targeting moiety which binds to at least one receptor present in circulatory vessels in Gut Associated Lymphoid Tissue (GALT). The method is useful for raising an immune response in an animal against antigens from Salmonella, Cholera, Helicobacter pylori, HIV, Candida, P. gingivalis, gut parasites, gut associated toxins, gut hormones, gut hormone receptors or gut associated cancers. The method is useful for raising both mucosal and systemic immunity against any antigen used in the composition
                                                                                                                            S
                                                                                                       Raising an immune response in an animal by administering composition comprising carrier and antigen bound to targeting moiety which binds receptor present in circulatory vessels in Gut Associated Lymphoid

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 19, Application US/08432697

Patent No. 6248330

GENERAL INFORMATION:

APPLICANT: Labigne, Agnes

APPLICANT: Sauerbaum, Sebastien

APPLICANT: Ferrero, Richard L.

APPLICANT: Thiberge, Jean-Michel

TITLE OF INVENTION: IMMUNOSENIC COMPOSITIONS AGAINST

TITLE OF INVENTION: HELICOBACTER INFECTION, POLYPEPTIDES FOR USE IN THE

TITLE OF INVENTION: COMPOSITIONS, AND NUCLEIC ACID SEQUENCES ENCODING SAID

TITLE OF INVENTION: POLYPEPTIDES.

NUMBER OF SEQUENCES: 44
                                                                                                                                                                                                                                                                                                                                                                                                                             2476
